

FESTIVE
FESTIVALS

Despite what some may say, fishmeal feed will attract silver fish. Use White Acres Baggin' Mix split equally with Van Den Eynde Supercup.

A light clouding ball of groundbait immediately attracts roach averaging 8 oz to the shorter swim while a couple of firmer 'jaffas' will take their time breaking down at 8 metres but will hold the bream.

Regular loose feeding of 0-12 casters over both swims is the key to sustaining the bites and casters are the ideal bait.

YEAR ROUND FISHING ACTION

THIS WILL BE THE FIRST YEAR **WHITE ACRES** HAS BEEN OPEN MOST OF THE YEAR, AND IT PROVIDES AN EXCELLENT OPPORTUNITY TO SAMPLE THE **BRILLIANT WINTER SPORT** THAT THE LOCALS HAVE ENJOYED FOR YEARS.

It's no secret that many anglers have moved to Cornwall because of the warmer winters and excellent winter fishing which is more like summer sport in the rest of the country. Roach, bream, perch and tench regularly hit 40 lb plus in December and January and most of the lakes are capable of this sort of sport. The carp action is also good with bags up to 100 lb still taken every winter and corn proves it's worth.

Places are being snapped up fast for December's Garbolino backed Silver Fish Festival and with roach averaging 8 oz, skimmers around the 1 lb mark, bream over 3 lb similar sized tench and perch around the 1-2 lb mark it's little wonder. Call the booking line now on **0845 458 0065** if you want one of the festival places or fancy a winter pleasure fishing break.

TACTICS

Clint will be fishing the festival so its a chance to beat the **White Acres Fishery Manager**. To show he's all heart Clint reveals his winter tips: 'In winter silver fish are a more realistic target off many pegs, as you can get bites all day long and they don't shoal as tightly as carp. I like catching the big skimmers and bream as well as quality roach so presenting a

bottom bait is my preference. Two swims one at 3 metres to start with and one at 8 metres for later on should be sufficient. Change to the 8 metre swim when you can see the odd bubble appear and expect the bigger skimmers and bream to respond..'

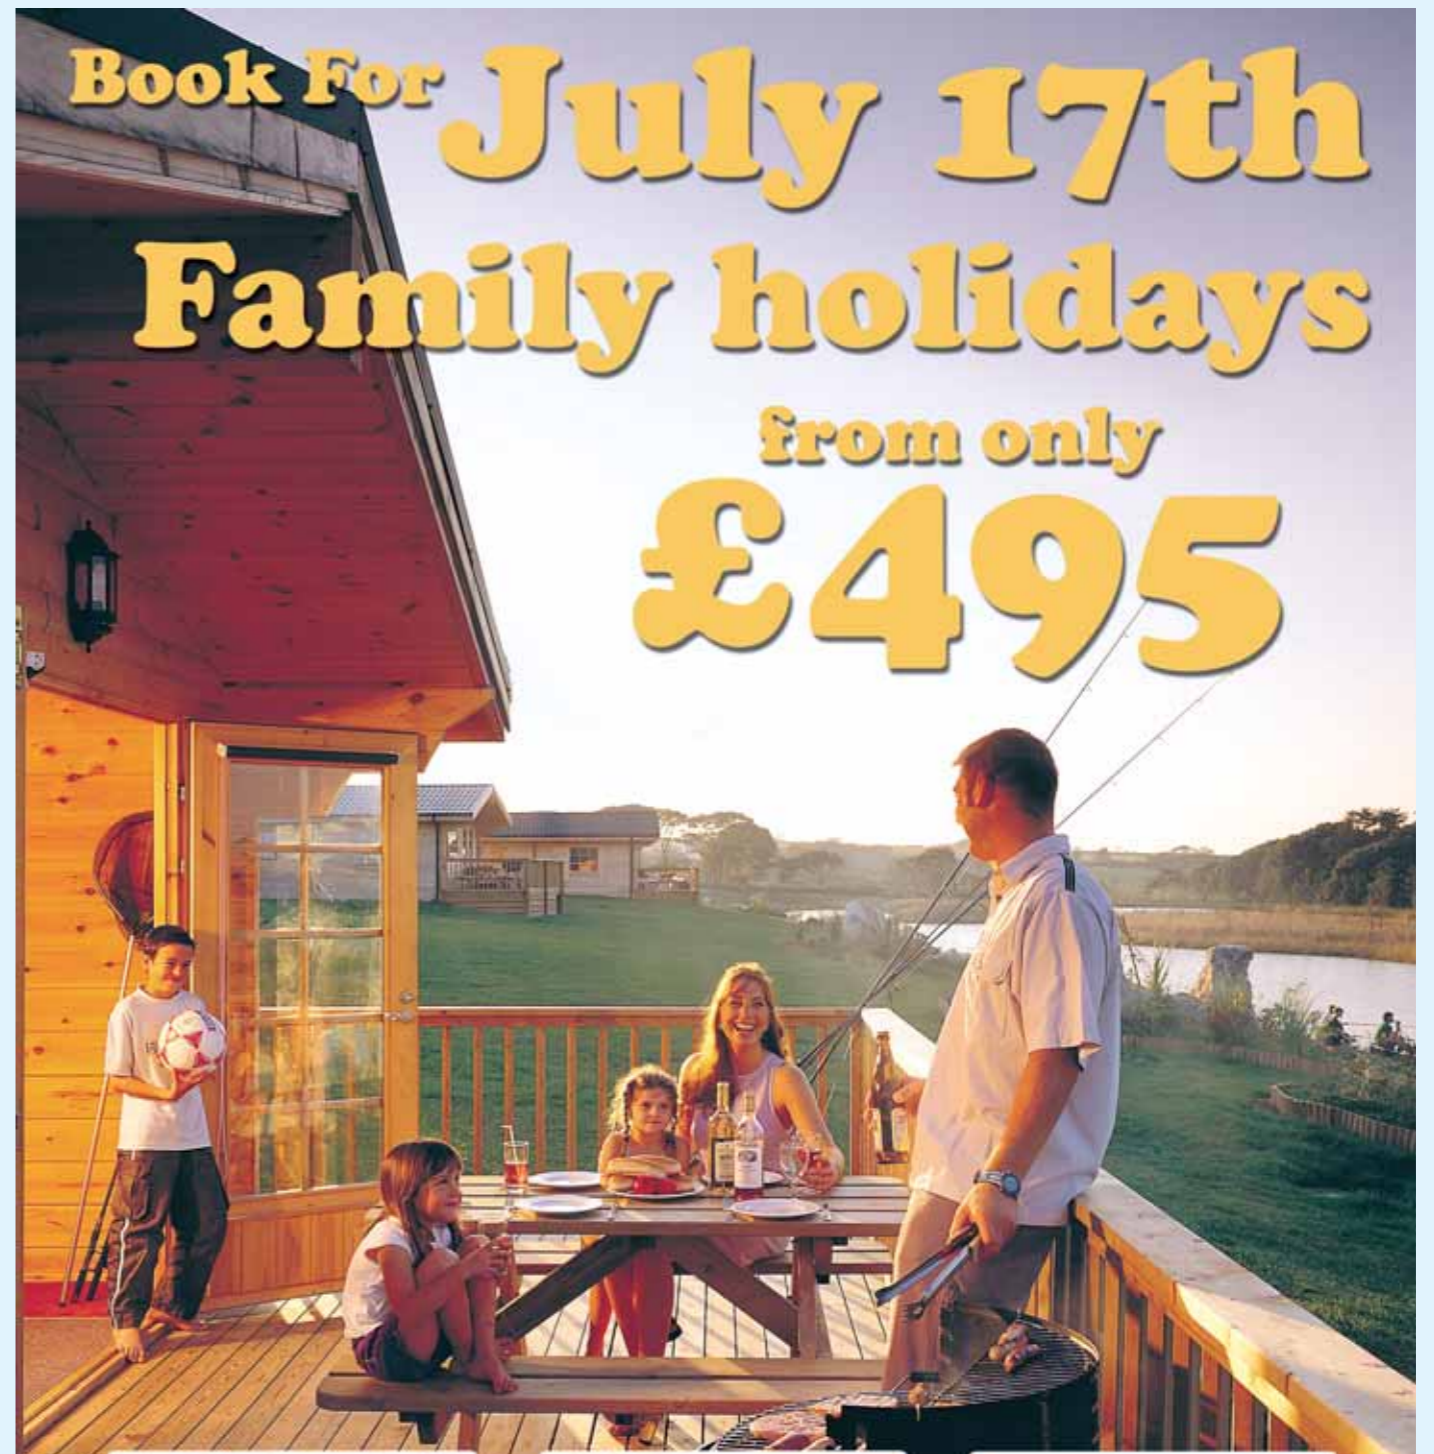

LINE: there's no need to drop below 0.10mm
